

Animals

Animals are endangered creatures.

Nature helps animals breathe.

I like all types of animals.

Mammals are dolphins and bats.

Animals eat meat, fish or plants.

Lions have strong teeth.

Some animals are smart.

The Little Earthworm

One day there was a little earthworm. That little worm had a wonderful place to live. Suddenly, that little worm was scooped into a shovel and he found himself in a pot. That little worm was so sad; so he decided to get out of the pot and outside in the ground. The little earthworm struggled. It took him all day and all night. Finally, he made it out of the pot. Luckily, the door was opened and he made it outside. The worm was so happy to be outside that it dug a hole in the ground where he belongs.

The End!

Did you know that a worm has no bones, no arms, legs or eyes? Their bodies are completely soft to help it move. Also, worms are cold-blooded animals. They have blood, but no heart.
